Job Experience

Softvision. April 2019 – Current.

QA Automation Engineer

Automating UI tests with Selenium WebDriver (Java/C#). Design and execution of strategies and test cases for both manual and automated testing. Backend testing with REST services (Postman) and Docker. Report and bug verification in test environments. Active participation in the ramp up and engagement of the new hires in the QA sector, and also in the interviewing process, working on the whole hiring pipeline with the HR team. Facilitating training processes and knowledge transfer for the QA team through courses inside the company.

Ualá. August 2018 – April 2019.

QA Engineer

Design and execution of strategies and test cases for both manual and automated testing. Monitoring application and infrastructure resources. Backend testing with REST services (Postman) manual and automated (JavaScript). Smoke and regression testing. Report and bug verification in test and stage environments. Project management tools such as JIRA and Trello. Automating QA processes with AWS (Boto3/Python). Advanced GIT knowledge. Facilitating training processes and knowledge transfer through research of relevant technologies, practices, contents and workshops with specialists for automating tests. Training new QA members. Team planning having two people in charge: planning and managing the day to day tasks. Organization and presentation of demonstrations for the client. Different platforms analysis (Android/iOS/Web). Scrum y Kanban methodologies. Management of different simultaneous projects.

Etermax. January 2017 – August 2016.

QA Engineer

Different platforms analysis (Android/iOS/Unity). Manual, automated, exploratory, smoke and regression testing. Test cases and checklists design and execution. Design and execution of automated tests in Unity engine (C#). Automated API testing with Postman (JavaScript) and Ruby. Induction documentation for work processes, tools and technologies for both development and QA teams. Working in methodologies and good practices for development (katas, pair programming, mob programming). Direct collaboration regarding the product's intern and extern quality through development tasks (Unity/C#). Bug report and fixing verification in different environments such as, development, test, staging and production. Management of different simultaneous projects. Agile testing. Project management tools (JIRA). Manual UI testing and backend testing.

Some of the projects I've been involved in: Pictionary and other projects currently in development.

Address: Capdevila 3448, Villa Urquiza, Buenos Aires.

Wunderman. July 2016 – January 2017.

QA Analyst
