CARLOS ALFONZO

Full-stack Web & Mobile Developer

ingalfonzocarlos@gmail.com • +58-414-816-7790 • Lechería, Venezuela

Professional Experience

Glewee

Apr. 2021 - Mar. 2023

Mobile & Web Frontend Engineer — Remote - Tampa, USA

React based frontend stack: the frontend stack is based on React, supported by Material UI and React Query to manage remote requests; for the mobile App, the stack was based on React Native for Android and iOS.

Typing robustness: using typescript in all ends and a private GitHub package to store and recycle all the business logic between frontends and backend. For testing, we used Cypress and Jest.

Project Management: based on agile methodologies, the team used scrum for more than a year and we started 2023 using Kanban.

The Galindo Consulting Group

Dec. 2020 - Mar. 2021

Full Stack Engineer & Scrum Master — Remote - Tampa, USA

Scrum based team. the 15 people team was organized with scrum methodoly to coordinate the Frontend, Mobile, Backend, Testing, Design and DevOps team members. The goal was an MVP for Glewee LLC. The product was delivered on time and without major issues.

Modern Infrasctructure using AWS for the server provider, React Native for the mobile app, React for the web app and Django for the backend

Keirón

Apr. 2020 - Oct. 2020

Full Stack Developer — Remote - Santiago de Chile, Chile

Cross projects common stack: Keiron based their multiple projects on a common stack of Lumen or NodeJs for backend and ReactJs for the frontend. I was mantainer of multiple of them and this common code base was helpful for easily context switching.

SERNATUR (National Tourism Service) requested a project I was assigned as Software architech and Tech Leader. The approach was a NodeJs-PostgresSQL backend stack with a ReactJs Frontend.

Oxoft

Jul. 2018 - Dec. 2019

Software Developer — on-site - Lecheria, Venezuela

Custom Stacks for every project: among almost two years several stacks were implemented for every solution but, mostly they were based on ReactJs for the frontend and NodeJs or Laravel for backend. The DB were mostly made of PostgreSql however, I was also part of some project based on Wordpress and Vanilla Js for customization.

Details

About me

I am a passionate and experienced Systems Engineer in the software industry with 5 years as a full-stack developer and mobile developer. I have a successful history working with small and medium size startups, designing SAAS products, and developing projects in many industries

Outside of work, I enjoy cooking and spending time with my family. I also love playing the guitar and singing in my free time. I find that these hobbies help me stay creative and focused when working on complex projects.

Systems Engineer

I.U Politécnico Santiago Mariño. 2014 - 2019

Programming Languages

Javascript · Typescript · NodeJs · SQL · Solidity · Python · PHP

Frontend & Mobile Stack

React.js · React Native CLI · Ant Design · Material UI · Chakra Design · Redux · React Query · React Native Expo

Backend Stack

Laravel · Lumen · Node Js · Express Js · Sequelize · Postgres · Maria DB · MySQL

Other Skills

Scrum · Kanban · Jira · Confluence · GIT · Gitlab · Github · Bitbucket · Figma

Spoken Languages

Spanish - native
English - C2
