- Jenkins
- Google Cloud
- AWS
- SonarQube
- Allure

EXPERIENCE

QA Automation Engineer

FabFitFun
April 2022 - Present

- Analysis and creation of casuistry, execution of test cases, and creation of related defects in the JIRA platform.
- Automation tests Web are performed with WebDriverIO (FrontEnd) and Axios (Backend)
- Leading the QA Team, creating bases of the area, vision for the future, and strategies to test and improve quality.
- All processes are carried out using the Agile Scrum methodology

QA Automation Engineer

SouthernCode
November 2021 - April 2022

- Analysis and creation of casuistry, execution of test cases, and creation of related defects in the JIRA platform.
- Automation tests Web are performed with WebDriverIO (FrontEnd) and NodeFetch (Backend)
- All processes are carried out using the Agile Scrum methodology

QA Automation Engineer

Inviu
January 2020 - November 2021

- Analysis and creation of casuistry, execution of test cases, and creation of related defects in the JIRA and TestLink platforms.
- Automation tests Web are performed with WebDriverIO, Protractor, and Cucumber framework.
- Automation tests Mobile are performed with Appium framework and Detox on the mobile app
- All processes are carried out using the Agile Scrum methodology

Chapter Lead QA Automation Engineer

123Seguro
July 2019 - January 2020

- Analysis and creation of casuistry, execution of test cases and creation of related defects in the JIRA and TestLink platform.
- Responsible for deciding all decisions in the area, both technical and quality processes.
- Automation tests are performed with JavaScript on the WebDriverIO and Cypress (only 6 months) framework. All processes are carried out using the Agile Scrum methodology, on the 123Seguro platform. For the backend, we used Postman and Chakram.
