Jonathan Rubina Garay

Full Stack Software Developer | Scala | ReactJs

Perú

Extracto

Full-stack web developer with 5+ years of experience developing web applications using technologies such as Scala, React, Java and services (SOAP & REST) working in agile and continuous integrated environments. Experience working remotely for USA clients and distributed teams. Interested in Javascript tech stack, functional programming, AWS.
Always looking for new learnings and knowledge.

Experiencia

Bitrock

Scala Software Engineer

enero de 2021 - mayo de 2024 (3 años 5 meses)

Italia

Worked over a dozen of microservices within the client's microservice architecture

Designed and implemented internal and external REST APIs according to business requirements

Migrated over a dozen of API endpoints from using SendGrid templates to a twirl template approach which allowed for easier maintenance and customization of email notifications

Worked on B2B integrations feeding client's partners with relevant information using partner's API and feed files

Bonzzu Inc.

Software Developer

noviembre de 2017 - febrero de 2021 (3 años 4 meses)

Remote

Scala Developer for Jemstep client

Collaborated as part of a distributed engineering team across the world. Fixing bugs and implementing new features for the client's Saas platform

- Migrated some hard coded configurations to the database, this improved the configurability of the software and helped to reduce the time for configuration changes to reach prod
- Improved docusign integration module to allow supporting more events, this allowed us to have a better data consistency between our database and our third party services
- Reduced the setup time for demos to prospect partners to the platform by updating an outdated Lisp script to automate most of the manual steps for a new partner setup.

Tech stack: Scala, Play framework, React Js, Akka Actors, Backbone Js, Docker. MongoDB, Redis. Github.GoCI

Focus In Lab
Software Developer
enero de 2020 - abril de 2020 (4 meses)
Trujillo, Departamento de La Libertad, Perú

Worked as a free consultant for a small company with a swiss client.

- Participated in maintenance and improvement of 2+ ios applications, developing unit and integration tests and refactoring code to improve maintainability of the applications.
- Participated in development of 2 React web applications
- Refactored some already existing components and improved them by creating a general library capable to be customized and reused internally in other projects, this reduced the complexity of the projects, improved code organization and also reduce development time for new projects
- Implemented e2e tests using cypress and cucumber and also implemented a mock api, this helped to meet quality expectations of the developed software and reduced the bugs in prod

Tech Stack:
Javascript, React, React-Router, React-Redux, Redux-Saga,Sass, PHP, Cypress, Json-Placeholder, Express, Docker, Swift. Bitbucket

Everis Peru
