Jorge Soto

Front-End Developer

Profile

Front-end developer here! I enjoy working with JavaScript-related tech stacks, though I'm not afraid of dabbing into new languages or technologies when the situation calls for it.

Employment History

Front-End Developer at Leniolabs_ LLC / Improving July 2021 — January 2025

Developer for one of the company's clients: ICE Mortgage Technology.

- Improved code maintainability and support by migrating micro front-end apps built using AngularJS to React.
- Designed RESTful API endpoints with Express to handle CRUD operations, including documentation via Swagger and monitoring/debugging through Splunk.
- Improved usability and accuracy of a dynamic form builder by migrating its layout system from Flexbox to CSS grid while using jQuery.
- Improved the tracking of multiple micro front-end apps' usage by migrating their deprecated Google Analytics (UA) implementation to the latest GA4.
- Configured automated application deployments and testing via Jenkins.

Developer for Vocale - https://vocale.ai:

- Converted Figma designs into reusable React components for the main website and dashboard.
- Developed the browser version of the widget's logic, including viewport detection, animations, and onboarding UI.
- Contributed to core feature development, including API integration, AI prompt engineering, and cross-site persistent configuration via LocalStorage and Window Message events.
- Deployed application containers using Azure and AWS EC2.

Front-End Developer at Kliks October 2020 — July 2021

Solo Front-End Developer for Kliks.io - https://app.kliks.io

- Created dynamic pages using React, Redux, and React Query.
- Increased efficiency and code reuse by helping create a design system for the platform.
- Debugged and improved API features using Express, Redis, and Docker.
- Improved app tracking and usability by connecting it to Google Analytics, payment processing services like Stripe and Dwolla, and insurance verification services like Axle.

Hobbies

Learning languages, exercising, watching movies, and online gaming.

Full-Stack Developer at Cobuild Lab

August 2019 — July 2021

Solo Developer for Storyrocket - https://www.storyrocket.com:

- Led the migration of a full-stack application from Laravel to modern React using NextJS and Express.
- Implemented a serverless back end using Firebase Functions and GraphQL to support features like API endpoints, scheduled tasks (CRON jobs), and dynamic image processing and optimization.
- Developed a role-based admin panel using Django to streamline site data management and support multi-level user permissions.
- Integrated MailChimp to support targeted marketing funnels and audience segmentation.
- Supported Project Managers and clients to plan out features and roadmaps for the platform.

Junior Web Developer & Junior Mentor at 4Geeks Academy, Maracaibo

September 2017 — June 2018

- As a Junior mentor:

I oversaw student progress and designed hands-on practice exercises to reinforce development concepts like pair programming, code branching, Git pull request workflows, and relational data modeling.

- As a Junior developer:

I helped the academy develop instructional websites and demo projects aimed at introducing students and potential candidates to foundational programming concepts like control flows and essential Git commands using libraries like PhaserJS.

Education

B.S. in Accounting, University of Zulia, Maracaibo

2015
