Skype	luciano30123

Work Experience

- **SPARKDIGITAL - QA ENGINEER - Starded on Dicember 2014**
    - Client: Classified
    - Main responsibilities: Started with manual testing for new functionality and bugs report using Jira, regression testing in different browsers and mobile devices, estimation of tasks assigned. Then I was assigned to different projects doing automation and manual when it was required. I Used Ranorex (Record and play tool) with C# for automated testing. Later I was assigned to a project which I needed to create a new automated testing project using Java, Maven, Spring, Selenium, TestNg and Jenkins. On another inside project I worked in an automated project using PHP, Drupal, Bootstrap, Junit, Jenkins,MySql and Jmeter to track performance over heavy loads. This last one was my main project which covered 100% of the regression and working as expected for more than 6 months without maintenance. Meanwhile I started a different project using Cypress with Javascript, mocha, chai, continuous integration with gitlab. Also for API testing I used Postman covering 100% of the happy path using schema validation. Currently I started a small project using python only for a different API validation for heavy loads (Testing more than 6500 of entries for Google Feeds)
    - Client: Classified
    - Main responsibilities: Automated testing in Drupal for features created each sprint, update old tests and maintain them. Create automated testing for Web services, for requests such as put, get, update, delete, post. Manual testing for UI features. Creating test cases for every new feature.

- **MAKING SENSE - QA ENGINEER – 2 YEARS**
    - Client: Lander

- Main responsibilities: Analyst requirements for new functionality, design new test cases and edit older ones. Manual testing of new features and bugs, validate UI with templates.Design and maintain automated test cases. Security testing.
- Doppler: Design and create test cases, import to Visual Studio Test Manager. Re-Design and update automated tests and load tests. Manual testing of new features and bugs, validate UI with templates. Manage test plan and requirements and goals for new functionality.
- Mobile projects: USBank(Windows Phone 7.5) – Fodor's NYC(Windows 7.5) - Iplan (IPad): Create test plans. Design test cases, design requirements for functionality with clients. Design automated test for API (validate data returned and if the data sent was updated) and load test.

Education

- Hilet - Web developer – Mar del Plata
- Atlantida Argentina - Software Engineering

Languages

- English: Advanced
- Spanish: Native
