Experience

Chief of Data & Business Intelligence

April 2020 - Present

Argentina

As a chief of Data & Business intelligence I am responsible of the Data & Bi team. My role is a key role due the team is responsible of all the data structure, processes and reports that are used in the business decision process. My responsibilities are:

- Team management using Agile methodology
- Budget administration
- Licenses administration
- Data Architecture and Data Quality
- KPIs
- Support

Main Achievements:

- Reduce 90% department costs applying reorganization and technology migrations
- Create and apply an architecture standard and naming convention for the company

- Change the previous methodology to assign objectives in the team(was a team work with the HR team)
- Include the Agile methodology in the Data team
- Train the team in AWS core applications for Data Management (Redshift, Glue and Athena). Also, in Power Bi and Jira.
- Migrate the reporting platform to Power Bi (in two months)

Lead Data Architect Latam

September 2017– April 2020

Argentina

As data architecture leader for the region I'm responsible of the regional big data platform in Latam. It includes technology, data modeling standardization, architecture designs and IT strategy to move the different projects in the countries into the regional data hub. Also, my role involves strong delivery tasks, I'm responsible to deliver the project following the architecture designed and aligned with the SLAs (Following E2E with the vendor).

This role includes big focus on management (Data Architecture Team) in Argentina and across the region. Focused in Azure and Google Cloud Platform. I'm leading the Data Architecture team, it is composed by two members, one data modeler and one technical resource.

Main Achievements:

- Define the customer centric standard data model for the region
- Design and Implement a Big Data Platform for Chile using Hortonworks distribution (Online and Batch)
- Design the Standard for the Big Data Solutions On the Cloud using Google Cloud Components.

Master Data Management Delivery / Technical Leader

February 2016 - August 2017 (1 year 7 months)

Argentina

As SAP MDM Delivery / Technical Leader my responsibilities are apply the best practices and the company standards in the MDM projects, approve the changes on the Master Data Model, collaborate with the Support Team (multi-cultural team) which is in Buenos Aires and India. Also, I'm responsible for the

three applications for materials creation in Latin America, it includes talk with the business every day, project coordination, support, coordinate the workload with the development team, etc.

Main Achievements:

- Design and Implementation of Master data model for Raw Materials in MS Master Data Services
- Customization of the standard tool for finish goods

Data Management & Integration Leader

May 2015 - February 2016 (10 months)
Belgrano, CABA

As a Data Management and Integration leader I'm responsible for the integration team (6 people) and the reporting team (2 people). The teams work in an agile environment adding or upgrading interfaces and reports for each iteration. The technologies used are Microsoft SSDT and Reporting Services.

Main Achievements:

- Complete the migration from SSIS 2008 to SSDT 2014 in a short time
- Implement a plan of benefits for the team depending of the grade of performance
- Reduced the rotation level in the team

Database Architect

October 2014 - May 2015 (8 months)
Belgrano, CABA

As Database Architect I was in charge of the of the transactional database redesign, core of the current web products. Also, I designed the login model for all batch processes that the company has actually. Daily interaction with the executive board of the company.
Main Achievements:

- Redesign the core business data model.
- Login Model for Batch Processes.
- Implement the Collaboration SharePoint Sites (Aligned with TOGAF) for project documentation.

Zurich Insurance Company Ltd

Solution Architect & Data Management Architect for Latam

November 2012 - September 2014 (1 year 11 months)

As a Solution Architect and Data Management Architect my principal tasks are coordinate the architecture projects for the region, work very close with the business to design the business, data, application and technology architecture designs (Aligned to TOGAF), participate in different workshops to decide the Global IT Standards for the company, negotiate with providers (Microsoft, Salesforce, Powerdata, etc.), design the Data Model for the BI Latam project (aligned to the IBM insurance model) and coordinate the analysis phase with the teams for Brazil and Mexico.
Also, I´m in charge of the definition, design and following of the application landscapes and heatmaps for each country of LatAm.
My role is regional, for this reason the different local architects of each country must be aligned with me to decide the proper design, applications and technologies for the projects.

Main Achievements:

- DRM tool implementation in Brazil for the sales department, finish the design of the Application Landscape and Heatmaps for each country of the region, definition of the data strategy, architecture. design definition for more than six projects per year, including TOGAF in Latam and include the documentation framework in the region for all the projects.
