Marcelo Alejandro Peotta

Marcelo started as a freelance when he was 18. His first salaried work was at 21 years old. He had the opportunity to learn about team working and industry technologies. Started with PHP, SQL, No-SQL, Shell scripting. He went slowly leaning toward frontend activities.

After working in different startups, Donweb hired him to develop an AngularJS responsive *email design software* from scratch. Two years later, he developed from scratch a native offline/online desktop application using web tech for an insurance claim adjusters company. Some of the main features were: live chat, a *printable document designer* and a 2D vehicle accident *sketch editor*.

After a period of time as a frontend developer in smaller companies, he was hired by Globant in mid-2016, working for transnational corporations and learning agile methodology.

Lately as a senior Typescript developer at Rockwell Automation, he worked in a *web tech based IDE* since its beginnings. He assisted in tech training and business meetings at US offices. Researching, designing, documenting, demoing and mentoring were part of any working day.

Summary of Qualifications

- ES6, HTML5
- TypeScript
- Angular
- React
- Electron
- Web

Languages

- Spanish (Native)
- English
