ABOUT ME

I'm a software developer specializing in analytical processes and continuous enhancement. Dedicated to maximizing the utility of available resources, I consistently deliver scalable and efficient long-term solutions. My proficiency in AWS is complemented by a track record of leading development teams successfully. Rather than succumbing to pressure, I prioritize goal-oriented work, ensuring both the quality of my output and the achievement of specific targets.

WORK EXPERIENCE

Revolt — May 2021 — Present

Software Architect

Client: Path Factory

I worked on the backend development of the new "Unified Content Library" system, which was built using Ruby on Rails, GraphQL, Apollo Federation, MongoDB, Elasticsearch, and KafkaConnect.

Client: Gravy

I served as a Backend Engineer for the new 2.0 version of their system. The technologies used included Ruby on Rails and MySQL databases.

Client: Very Style

In this role, I acted as a Backend Engineer and was responsible for both the development and maintenance of the system. This project utilized AWS Lambda, CloudFront, S3, MySQL RDS, and AWS Cognito.

Client: Modo Vacaciones

For this project, I took on the role of Team Lead. The platform was developed using NextJS with Vercel for hosting. It also used MySQL RDS, S3, and CloudFront.

Additionally, I worked on other cross-company projects as a consultant.

Globant — Jan 2020 — May 2021

Software Design Engineer

Client: Prisma Payment Media S.A.

Application: Todo Pago

I worked on maintaining the Backoff system, to which we added enhancements to

comply with new legal regulations set by the UIF (in Argentina).

I also participated in the creation of the new online tax processor, which was designed to handle various tax withholdings based on the type of company and the applicable laws for their jurisdiction.

Technologies used: Java 11, Spring Boot, MySQL Server, Elasticsearch, Kafka.

Keenvil **Oct 2017 — present**

Lead of Applicatios Services

Responsible for the development, maintenance and scalability of the Back End

- Monitor the correct functioning of all microservices.
- Maintenance the library of the company.
