sol écolution™

Sol Ecolution is the low carbon and renewable energy division of The Sol Group.

Sol Ecolution delivers on The Sol Group's commitment to energize the communities in which we operate by facilitating the development of renewable and low carbon energy solutions. We are actively exploring commercial and utility-scale development opportunities in solar, battery storage, and other renewable energy technologies with regional applications.

Sol, the Caribbean's largest independent energy provider, with operations spanning 23 countries, and Sol Ecolution are committed to powering our region's journey towards a more sustainable energy future.

Our Services

Our commercial and utility-scale full-service offering includes:

Structure and Services

- Project financing
- Site selection and assessment
- Project scoping and design
- Pre-feasibility and feasibility studies
- Contract negotiation
- Engineering Procurement and Construction services*
- Operations and maintenance
- Asset management

*Provided through local partnerships

Technologies

- Solar
- Battery Storage
- Emerging Technologies

Commercial Solar Offering

Sol Ecolution has developed a third-party commercial solar offering to facilitate the energy transition for commercial customers in our markets. The offer highlights include:

- Solar PV installation at no upfront cost
- Savings on monthly electricity bills
- Operations and maintenance coverage
- Insurance for solar PV equipment

Renewable Energy Development: Scope and Structure

Sol Ecolution is interested in participating in renewable energy projects across a range of sizes, stages, and investment structures. Our customer segments include retail, commercial, industrial, utility, and government organizations.

Project Size
Commercial to Utility Scale

Project Stage
Greenfield to Operational

- Strategic Partner
- Owner/Operator
- Joint Venture
- Special Purpose Vehicle

Sol's Solarized Footprint

Guided by our commitment to a sustainable energy future, Sol Ecolution is solarizing our network of retail stations, offices, and terminals across the Caribbean. We currently have a pipeline of 100 sites across 18 markets and are looking to solarize the majority of our footprint over the next three years.

Solarizing our network of 220 retail stations, terminals, and offices will offset an estimated 14,032 metric tons of greenhouse gas emissions per year.

This is the equivalent of:

35 million
miles driven by the average car per year

1.7 billion
smartphones charged per year

17 thousand
acres of forest carbon capture per year
