$$\text{LTIFR} = \frac{\text{Lost Time Incident (including Fatality Case)}}{\text{Total Man Hours Worked}} \times 1{,}000{,}000$$

$$\text{TRIFR} = \frac{\text{Number of Recordable Case (including Lost Time incident)}}{\text{Total Man Hours Worked}} \times 1{,}000{,}000$$

LTI : (Lost Time Incident) is a work - related event(s) in which an injury or ill health (regardless of severity) or fatality occurred, or could have occurred which result in a person being medically unfit for work on any after the day of occurrence of the occupationally injury.

LTIFR : (LTI Frequency Rate) number of LTI including fatalities per one million man - hours worked.

TRIFR : The sum of LTI and Recordable Case per one million man - hours worked.

SR : (Severity Rate) number of lost day per LTI. There is no lost day associated with personnel who died as a result of a fatal incident.

Notes: Manhours computation will be based on 24 work-hours for Offshore crew and 10 work-hours for Office Staff, because these are the hours of risk exposed to personnel.
