Profile

I have been developing software for more than 7 years. I currently work as Backend developer at Equality Ltd., managing the interchange of data between the server and the users (API rest), developing all server's logic and doing maintenance of database.
I am a proactive and responsible person who likes facing new challenges and learning about new technologies. I have vast experience in managing servers. I have participated in some Hackatons in which I had to work with unknown people picked up at random and complete a given challenge with a high rating.

Work Experience

Developer

AS400 platform — *2011 – 2015*
