Profile

I am a software developer with a very good experience working both in a company and independently. My strength is dedication and perseverance. I especially like working in Front End, but I'm curious and I'm not afraid to work in what refers to Back End. I adapt to the technologies that are needed to carry out the work, I love finding solutions to problems.
I am a pro-active person with learning ability, I consider myself more practical than theoretical, I am applied, and I like to work in an orderly manner and in a team, I consider myself a very good companion, self-motivated and able to work hard and under pressure.

Goals

My main objective is to grow professionally; I want to be part of a company in that everything is learning. It is my desire to learn, absorb knowledge, train always, and bring my work experience too.
I am looking for a position in IT area in order to dedicate myself to the development, research new technologies and / or maintenance of current developments.
I need to work in a place where I can improve my knowledge in English.
I want to take courses (i.e mobile technologies and English lessons) to continue growing in my career, the immediate step that I want to make is to become an architect.
My goal is to leave the comfort zone and routine, find new motivations!

Work Experience

Application development senior analyst - Accenture, 2011 - date
I have been working in many teams that worked with Java, PostgreSQL, Cordova, JQuery mobile and JS libraries. Work in local and remote teams. I also designed and developed software using some tools such as: Team Foundation Server (TFS) or Azure DevOps as repositories, Visual Studio, Visual Studio Code, Eclipse and technologies such as HTML / CSS, JQuery, Angular 2, 4 and 6, handling of mongoDB and some elastichSearch.
Acctually I'm working with agile methodologies (sometimes with the role of scrum master) and developing serverless applications using Angular, AWS (S3, lambdas, api gateway), Git, Jasmine, Protractor. I have an Internal Agile methodologies' certification.

Developer - Sixtina Comunicaciones Creativas, 2009 - 2011
Maintenance and web development in team (HTML mainly and JAVA). I worked on Technical support to clients, Investigation to solve any inconvenience related to the development or technical service (Networks, remote connection, studio pc maintenance), always trying to find the solution where possible.
Start-up of web system under Tomcat and PostgreSQL locally and remotely for client (in Windows and Linux).

Freelance working, 2009-date

- Web development
- Support and develop using Angular 6 for Infinity Company
- Research and adaptation of external Uber clone to be used by taxi drivers in La Plata City

---

Education

University of Computing Sciences, UNLP
Degree: Computer Analyst (pending thesis to obtain a bachelor's degree)

Language

Spanish (native)
English(Technical, Intermediate)

Personal Strengths

Good experience working with different platforms and technologies, mainly for Front End development, anyway I have also worked, to a lesser extent, in Back End development.
I have also worked using database such as MySQL, PostgreSQL, MongoDB and DynamoDB. In the last time I have been working with AWS (S3, Lambdas, API Gateway, DynamoDB).
I also have some experience coding test cases using Jasmine and Protractor.
Likewise, I have worked using GIT for team coordinated work, tracking changes in source code during software development.
Experience working with Agile Methodologies, sometimes playing the role of scrum master.
