Mariano Rodriguez

Buenos Aires, Greater Buenos Aires, Argentina

Productivity Engineer en Mercadolibre.com

Experience

Productivity Engineer at Mercadolibre.com
August 2017 - Present (2 years 6 months)

Following the idea of a Productivity Engineer, I was able to play several roles such as developing a linting service or creating frontends for our own applications. The main goal is to be a service oriented area that works in a cross way with all the different sectors of the company and not with some particular ones. We're in charge of the best practices, CI/CD and developing tools that make developers life easier.

Currently developing an internal admin using React

QA Automation Engineer at intive-FDV
March 2016 - August 2017 (1 year 6 months)

As intive-FDV's first QA, I was responsible for defining the architecture, language and frameworks for the Automation solution, deciding that the way to go was C#, Selenium and a PageObject's pattern based entirely on PageFactory.

.NET / SQL Developer at Accenture
September 2014 - May 2016 (1 year 9 months)

Joined Accenture as a backend developer for internal applications in VB.NET and C#. After a year the project dissolved so I was reassigned to the Automation Team, where we worked with C# and CodedUI. After a couple of months I was in the middle of a proof of concept of Selenium Webdriver, where we exposed the advantages of Selenium vs CodedUI

Analista de Performance at Punto Rojo Marketing
2011 - 2012 (1 year)

Education

Universidad Tecnológica Nacional
Tecnicatura superior en Programación, 2011 - 2012
