PROFESSIONAL EXPERIENCE

WES-IT 18/05/2020 – Current

●*sr QA Engineer:* From May 2020 I'm working as support for the automation team, reviewing failed tests run by the Pipeline and updating them if necessary.

Applica Uy 02/09/2019 – 24/04/2020

●*sr QC:* From September 2019 until January 2020 I worked on a banking project which is transforming from waterfall to agile. My tasks involve requirement analysis, user story creation, writing and execution of test cases.
From January 2020 until April I was working on golf application design to the subscription to memberships and booking of tee times working with Scrum methodologies. My tasks involve user story analysis, writing and execution of test cases, and develop further the new Cypress automation framework developed by the company.

Endava 04/05/2018 – 08/30/2019

●*sr QA Engineer 1:* In the first quarter of 2018 Endava started the merging process with Velocity Partners and completing it in April. This led to a restructure and renaming of the positions within the company, therefore the new position but my day to day remained the same.

Velocity Partners 02/14/2014 – 04/04/2018

●*sr QA Automation Engineer:* I started in this company as a SSr, right now I'm at QA Senior Engineer level 1. I worked 4 years in the same project where we worked with Scrum and Kanban methodologies, at first we used Target Process as a tracking tool but afterwards we moved everything to Jira and for testing we used the Zephyr complement. I have created Documents through the Confluence (document sharing tool). My main focus was the creation and execution of test cases, then use the Automation Framework to recreate them and add them to our test suite. Regarding Automation I started using Ruby with Watir, then the framework changed to Java with Selenium and currently I'm using C# with Selenium.

Neoris 04/19/2010 – 02/14/2014

● *Agile QA Tester:* Since we've started to use agile methodology, I had the role of a QA Tester in one of the group of projects mentioned before. My assignment at that time was to coordinate testing tasks with one tester, support tasks with three developers from Argentina one functional analyst and two Data Base Managers from the United States. Also coordinate assist and participate actively in the poker planning sessions, Stories Review, Review and approval of design documents, testing assignments estimation, participate in scrum meetings, make daily and weekly advance and status reports. All the tasks mentioned above in addition to the common testing assignments, like: writing and execution of test cases, exploratory testing and defects management.

● *Tester JR:* I worked junior testing activities, that in the first moths in Neoris, where to read documentation, writing and execution of test cases, perform Peer Reviews, upload defects to the Team Foundation Server tool. Afterwards I change project in which I used HP Quality Center tool and performed the same activities as before. This knowledge led me to a better understanding of the testing process and its effect in the application Development. I have used my expertise in software developing for the testing assignments without losing the final user experience, in order to find better results. The project was one of the biggest within the company and I always received good feedback for my performance.

EDUCATION

Universidad Abierta Interamericana (Incomplete with no degree) 2007–2010 / 2014

Gregoria Matorras EET N°1 (High School) 2006
Organizational Management Technician.
