Miguel Ignacio Carrizo

QA Automation at TECSO.

Argentina

Extracto

I am an automation tester. I like writing code for tests with page object pattern. I enjoy being involved not only with the code for automation but also with business rules.

I am capable of recognizing the culture, practices and procedures in an organization to implement information management and software development.

Furthermore, I have experience as Automation/Manual tester at Coding club Endava as well as Automation at OZ using appium with Java and selenium for mobile testing. Last year I gained experience as Automation and Manual tester being part of the Coding Club organized by Endava. Also, this year, I have being working at OZ as Automation tester using Appium with Java and Selenium for mobile testing for one of the company's most important client.

My skills also include the use of Webdriver io using Javascript to automate test cases. I can also design and execute manual test cases and use API services. So far I have been part of projects working with agile methodologies.

- My personal project: Web site automated
- Technologies used: Javascript - NodeJs - npm dependencies - Webdriverio "jasmin framework"- Page object patteron - git bash.
