Objective

To work in an environment which encourages me to succeed and grow professionally where I can utilize my skills and knowledge appropriately.

Skills

- Java, Spring, Hibernate, IntelliJ Idea, Eclipse, Gradle, Maven, Shell script
- C#. net, Asp. net, Visual studio, Powershell
- Git, Bitbucket
- Relational databases: sql server, my sql, postgresql
- No Relational databases : mongo db
- Web design: Html, CSS, JQuery, Php

Experience

- **Flexiti (Flx-arg)** 2018/12 - present
  Java & Net Semi senior Programmer
  Flexiti is a Fintech, I started as Java backend developer, creating new web api services, using spring boot & spring data frameworks. Generating unit testing by using Mockito with test coverage. Using deploybot and Azure devops tool to continuous integration of the product. I Used different design patterns and implemented some complements as lombok plugging to optimize the quality of the code.
  I used postman to test web services.
  The Ide selected was IntelliJ Idea.
  After a few months I started to develop in
  Net, using . net Framework on Visual studio suite. I created and modified api rest full services and updated web application with Asp. net. I Used some design patterns as CQRS for C#. Using and automating test with Postman (by using Javascript). mapping database using linqtodb library.
  After. I've started to work for business as usual project, supporting business needs as developer and analyst, to fix and maintain the system and the consistency of customer data used by reporting teams.
  I've created store procedures in sql server and linqpad to solve inconsistencies.
  Working in a Fintech I had experience with concepts of accounting, statements and transactions.

- **Nemo** 2018/08 - 2018/12
  Java Semi senior Programmer
  In this short experience I worked in support team of booking application called Price Surfer, dedicated to providing the best offers to hotels and trips.
  Analyzing soap and restful services logs and source code. Making some developing tasks and adding more tests to the application.

- **Neuralsoft** 2015/11 - 2018/07
  Java backend developer
  I worked in a new platform for modeling and generate new ERP systems, developing new features, generating new technical documentation, standards documents, and integrating different layers of a monolithic system made in Java, with self framework based on Key-Value-Code pattern to define objects.
  I used git and Jenkins tool to continuous integration of the product.
  My responsibility was related to all the logging and notification components, the exception management including different design patterns implementation. Creation of unit test. As database PostgreSql. As part of this project I had to understand the application of different types of entities related with Clients, Invoices, and other important factors of ERP systems.
  The product was composed for some characteristics very interesting as Intelligent Consultants, Business data integrity and queued processes to update model.

- **other experiences** 2008/05 - 2015/10
  Cobol, C, Vb6, Java EE developer
  In this time I been working with various technologies and I have learned about process of product development, unit testing, batch processing, requirement analysis, functional and technical documentation, standards and procedures.
  I started in Accenture as trainee in BBVA project on Cobol, then passed to Telefonica Spain project called Apolo in language C/C++, I have been working given support to the businesses 24x7. Then I passed to work as freelance and tried to make my own templates to work with some clients directly. I created a template of one page application for web sites configurables by client.
  Then I pass few months working in Ternium Siderar in Systems migrating product from Net to C#, contracted by Neoris. I left because I had to travel to another city all the days. Then I started in a cooperative of software industry using vb6 to support system of Celulosa Argentina until 2015/10.

Education

- **Gral Urquiza institute** 2020
  System Analyst
  Tertiary

Projects

- **Web designer freelance**
  I have created a template for one page application using Php, Html, Css to give support some clients with admin portal to configure site.
