HSD, Electronic Technician

Languages

- Spanish (native speaker)
- Portuguese (intermediate) – JPMC Courses.
- English (upper intermediate) – British Learning Institute. JPMC Currently taking classes.

Career Summary

My career began as a computer fan. I started assembling computers, disassembling those same computers and trying to figure out how they worked. Later on, I went to a technical school where I was faced with Assembler; that was the first time I had started scratching my way into this world. And I liked it, I felt comfortable there. This path led me to IBM, where I learned a lot about electronical devices. However, I missed the magic on it: how devices communicate to each other's and how they turn lines of code into real behavior.
Back then, some colleagues recommended SAP. I tried, but in the same quest I found JAVA and it impressed me.
Since then, I have figured that this path is an endless learning journey. New technologies always appear, others become standard and old standards are forgotten. In this journey, keeping yourself updated is a must.
Focused on that idea, I develop new skills, I learnt things aplenty and improved the ones I had already learnt. Going through great companies and excellent teammates have helped me become what I am today. This journey is just beginning and I am anxious to see what comes next.
