Lucas Alberto Moreyra

Software Engineer - Infor

Place and Date of Birth: Buenos Aires, March 19, 1990

Nationality: Argentine Marital status: Single

Phone number: 4864-2876 Cellphone: 1568130851

E-mail: lucas.moreyra@gmail.com

Education

Universidad Tecnológica Nacional - System Information Engineering, 2009 - 2017

Summary

My objective is the optimization of resources through design and software construction, being the most important for reducing costs and/or generate income for the business through this activity.

I consider the architecture and the quality similar to fundamental pillars for a professional execution and with a future projection which will construct generic components in order to prolong the utility life.

Considering the experienced I have developed through productive and new projects, I have specialized in back-end with its respective unit testing and have performed tasks for front-end with a medium complexity.

With respect to technology, Java and Spring MVC have always been present throughout my career, but consider very importantly the various options when commencing any task since every technology offers different abilities. Throughout my hobbies, I am constantly engaging in new technologies and tools which usually eases my workload.

Experience

Software Engineer at Infor
May 2017 - Present

Currently working for the retail industry, developing the backend server which perform actions on the stores' transactions.
