Project Leader en Despegar.com

Summary

My personal goals are to continue developing my professional career in two directions. In the technical direction i enjoy learning new technologies and taking online courses, looking forward to see which of these new technologies could serve for projects in which i am involved. Im also always trying to be in touch with high technological profile people to know new kind of problems and also solutions. I love the designing stage of a solution and i always want to be part of the developing stage of it.

I have gained a lot of experience in big data technologies as well as building robust applications that support large amounts of traffic and manage large volumes of information.

I love programming, so beside my leadership position that i have today, i still program in the teams im involved. I enjoy designing software and learn from other people new approaches to resolve problems.

Experience

Project Leader at Despegar.com

November 2015 - Present (2 years 11 months)

Here in Despegar i have been part of an internal startup to develop a marketing online (adwords) bidding optimizer for the past 4 years. In this project we use BigData technologies such as Hadoop, Hive, Spark, Cloudera, Azkaban, Kafka, Cassandra, SQS, etc... and we are optimizing millions of keywords. I have been part of the entire design of this solution that involves multiple applications varying from Web Applications to Batch Processes and to develop this applications we use Java or Scala as programming languages. We also take care of the infrastructure of our project so we know a lot about Aws Services such as S3, EC2, Docker, ECS, etc.

I am leading four different teams:

- Research Team: Team of mathematicians that find best forecast algorithms for the optimizer.

- Optimizers Team: Team that has the responsability to develop and mantain all the solutions of the optimizer. (Some Technologies we use: JAVA8, SCALA, Docker, Hadoop, Hive,Azkaban, AWS Services, EMR, S3, ReactJs, Play ...)

- Tools Team: team that develop all kind of solutions for the online marketing team in despegar. (Some Technologies we use: JAVA8, Docker, Hadoop, AWS Services, S3, Many API Rest from different medias as google, facebook, etc ...)

- Tracking Team: team that develops the whole solutions of tracking entries to the site and later conversions. This team is in charge of programming the Attribution Models for this conversions to the different medias involved. For more information go to http://clicklab.com.
(Some Technologies we use: JAVA8, SpringBoot, SpringMVC, Kafka, Cassandra, AWS Services ...)

I have a continuous contact with the clients we have, and also is one of my responsibilities to improve every day my knowledge about our business and be in the edge of the new technologies that appears.

Teaching at Universidad de Buenos Aires (UBA)
March 2014 - March 2016 (2 years 1 month)

I was teaching for two years in the university a programming subject of the Informatic Engineer career. Is a subject that always is dictated in the middle of the college career.

Technical Leader at Despegar.com
October 2013 - October 2015 (2 years 1 month)

Analyst Developer at Despegar.com
March 2012 - September 2013 (1 year 7 months)

Design and develop of the custom solution for a marketing online investment optimizer.

Analyst Develop - Team Leader at C&S Informática S.A.
March 2010 - February 2012 (2 years)

C&S is a medium software factory, in which i have been involved in many different projects developing and leading the team, getting in contact with different clients and businesses. Some project i have been doing here were SUBE (Unique System of Ticketing of the Public Transportation in Argentina) , NEC (Custom solution for this company), ArgenPer.

Semi Sr Java Developer at Ternium
July 2007 - December 2009 (2 years 6 months)

JAVA developer in the NCA project which takes care the whole line of production of steel of the company. We develop a custom solution for every part of the production, from the blast furnace with the raw material to the last machines that makes the finished product.

Education

Universidad de Buenos Aires / UBA
Informatic Engineer, 2004 - 2011
